

Accelerate Your Azure Red Hat OpenShift (ARO) Journey with Biqmind

Not every organization has the expertise, resources or time to create containerized environments. But this is increasingly vital as businesses scale their applications. With containerized environments, other enterprise requirements from maintaining data sovereignty and managing security are also considerably more challenging.

Microsoft® Azure® Red Hat® OpenShift® enables enterprises to focus on adopting container-based application development, without having to worry about the underlying environment or Day 2 management.

With our team of certified Red Hat OpenShift specialists and as a Microsoft Azure partner, Biqmind can enable your teams to implement ARO and unlock its benefits for rapidly delivering business value.

BIQMIND ARO SERVICES

Educate

2-day Workshop:

- Introduction and benefits of Red Hat OpenShift Container Platform(OCP)/Azure Red Hat OpenShift (ARO)
- Hands-on sessions for architects, developers and DevOps teams

Assess

- Cloud-native assessment of existing applications
- Platform and infrastructure assessment
 - New implementation on ARO
 - Hybrid (on-premise and ARO)
 - Multi-cloud
- Accelerate
 - Advanced implementation themes: High Availability (HA), Scaling, Disaster Recovery, Policies, DevSecOps

Implement

Proof-of-Concept (POC)/Projects:

- Design and deployment of ARO
- Application migration
 - Legacy to ARO
 - Other platforms to ARO
- CI/CD process and pipeline creation

ARO BENEFITS

- Enjoy support for traditional, cloud native and serverless tools
- Consume Azure cloud services directly from Kubernetes
- Scale on-demand and get choice of application nodes (standard/high-memory or high-CPU)

WHY WORK WITH BIQMIND

Biqmind provides specialist resources and software tools to help companies make the transformation to cloud-native possible. Our certified OpenShift specialists have field experience in designing large-scale migration and deployment projects across financial services, telecommunications among other industries. From evaluating existing workloads, developing a strategic plan, performing production deployments, to mentoring your resources, we build a sustainable roadmap and equip your team to use ARO for mission-critical enterprise applications.
